

# PUBLIC NOTICE

## PUBLIC NOTICE REQUIREMENTS SYSTEMS CONVERTING TO CHLORAMINES

The City of Hewitt Public Water System (ID 1550031) provides surface water from the City of Waco, which has been disinfected through the use of chloramines. The use of chloramines is generally intended to benefit customers by reducing the levels of disinfection byproducts (DBPSs) in the system, while still providing protection from waterborne disease.

However, chloramine disinfection can cause problems to persons dependent on dialysis machines. A condition known as hemolytic anemia can occur if the disinfectant is not completely removed from the water that is used for the dialysate. Consequently, the pretreatment scheme used for the dialysis units must include some means, such as a charcoal filter, for removing the chloramine prior to use. Medical facilities should also determine if additional precautions are required for other medical equipment.

In addition, chloraminated water may be toxic to fish. If you have fish tank, please make sure that the chemicals or filters that you are using are designed for use in water that has been treated with chloramines. You may also need to change the type of filter that you use for fish tanks.
